INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No.

PCT/EP 03/09292

i.	Basis	of the	repor	t
----	--------------	--------	-------	---

1. With regard to the **elements** of the international application (Replacement sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to this report since they do not contain amendments (Rules 70.16 and 70.17)):

	Desc	cription, Pages			
	1-23		as originally filed		
	Clai	ms, Numbers			
	1-14		as originally filed		
2.	With lang	Ith regard to the language, all the elements marked above were available or furnished to this Authority in the inguage in which the international application was filed, unless otherwise indicated under this item.			
	The	se elements were ava	ilable or furnished to this Authority in the following language: , which is:		
		the language of a trai	nslation furnished for the purposes of the international search (under Rule 23.1(b)).		
		the language of public	cation of the international application (under Rule 48.3(b)).		
		the language of a train Rule 55.2 and/or 55.3	nslation furnished for the purposes of international preliminary examination (under 3).		
3.	With inte	With regard to any nucleotide and/or amino acid sequence disclosed in the international application, the international preliminary examination was carried out on the basis of the sequence listing:			
		contained in the inter	national application in written form.		
		filed together with the	e international application in computer readable form.		
	\boxtimes	furnished subsequen	itly to this Authority in written form.		
	\boxtimes	furnished subsequen	itly to this Authority in computer readable form.		
		☐ The statement that the subsequently furnished written sequence listing does not go beyond the disclosure in the international application as filed has been furnished.			
		The statement that the listing has been furnitudes.	he information recorded in computer readable form is identical to the written sequence ished.		
4	. The	e amendments have re	esulted in the cancellation of:		
		the description,	pages:		
		the claims,	Nos.:		
		the drawings,	sheets:		
5	. 🗆	This report has been been considered to	n established as if (some of) the amendments had not been made, since they have go beyond the disclosure as filed (Rule 70.2(c)).		
(Any replacement sheet containing such amendments must be referred to under item 1 and ar report.)					
6	. Ad	ditional observations,	if necessary:		

INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No.

PCT/EP 03/09292

111.	Non-establishment of opinion with regard to novelty, inventive step and industrial applicability
1.	The questions whether the claimed invention appears to be novel, to involve an inventive step (to be non

	obvi	byious), or to be industrially applicable have not been examined in respect of:			
		the entire international application,			
	Ø	claims Nos. 1-4 (industrial appl	icabilit	y), 3-6,8,9 (c	ompletely), 1-14 (partially)
		because:			
	Ø	the said international applicatio which does not require an inter	n, or th	ne said claim al preliminary	s Nos. 1-14(partially) relate to the following subject matter vexamination (specify):
		see separate sheet			
the description, claims or drawings (indicate particular elements below) or said claims Nos. 3-6, unclear that no meaningful opinion could be formed (specify):			cular elements below) or said claims Nos. 3-6,8,9 are so d (specify):		
		see separate sheet			
	×	the claims, or said claims Nos. opinion could be formed.	3-6,8,	9 are so inad	lequately supported by the description that no meaningful
	☒	no international search report has been established for the said claims Nos. 1-14(partially),1-4(industrial applicability)			
2.	A meaningful international preliminary examination cannot be carried out due to the failure of the nucleotide or amino acid sequence listing to comply with the standard provided for in Annex C of the Administrative Instructions:				
		the written form has not been f	furnish	ed or does n	ot comply with the Standard.
		the computer readable form ha	as not l	been furnishe	ed or does not comply with the Standard.
V.	 Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement 				
1.	Sta	utement			
	No	velty (N)	Yes: No:	Claims Claims	12-14 1,2,6,10,11;
	Inv	rentive step (IS)	Yes: No:	Claims Claims	12-14 1,2,6,10,11;
	Inc	dustrial applicability (IA)	Yes: No:	Claims Claims	5-14 1-4

2. Citations and explanations

Non-establishment of opinion (Continuation) 111.

- The applicant is reminded that claims or parts thereof for which no International 1. Search Report has been established, will not be the subject of the International Preliminary Examination (Rules 66 (1) (e); 70 (2) (d) PCT). The conclusions drawn in the International search report are briefly summarized below: the ISA has found a non-compliance with Article 13.1 PCT, unity of invention. Claims 1 - 14 have only been searched partially, namely with respect to the first invention, the latter being considered for the subsequent examination procedure.
- Claims 1 4 relate to subject-matter considered by the IPEA to be covered by the 2. provisions of Rule 67.1 (iv) PCT. Consequently, no opinion is formulated with respect to the industrial applicability of the subject-matter of these claims (Article 34(4)(a)(i) PCT).
- The terms "pre-administration sample" and "post-administration sample" in claim 3 3. are no generally used terms, and could lead to misunderstanding by the skilled in the art. Said terms must be defined more clearly, e.g. in a technical manner. In addition, claim 3 is not supported by the description as required by Article 6 PCT: in particular the IPEA cannot find any evidence for step (f) of claim 3, which encompasses as the last step of said method, namely the adjusting of the agent. Said claim is therefore exempt from further examination.
- 4. The method of claim 4 is not supported by the description, since no such method is detailed in the description. The description simply reformulates the problem of establishing such a method for preventing, inhibiting, reducing or treating CR in a transplanted subject, Article 6 PCT. No examination can be carried out on said claim.
- Claim 5 is not clear, since it is not revealed how the method properly works. In other 5. words, it is not revealed how to get from the monitoring of mRNA expression levels of one or more genes or gene products to the identification of agents for use in the prevention, inhibition, reduction or treatment of CR. The applicant does not sufficiently identify the technical features / methodological steps of the method claimed but merely reformulates the underlying technical problem. Claim 5 is formulated as an effect to be achieved and therefore does not meet the requirements of Article 6 PCT in that the matter for which protection is sought is not clearly defined. No examination can be carried out on said claim.

- **EXAMINATION REPORT SEPARATE SHEET**
- Claims 8 and 9 are not supported by the description since the description only 6. provides support for the performance of the underlying methodology with mRNAtranscripts and not with protein (Article 6 PCT).
- Reasoned statement (Continuation) V.

1. CITATIONS

Reference is made to the following documents:

- D1: SUTHANTHIRAN M: "Human renal allograft rejection: molecular characterization." NEPHROLOGY, DIALYSIS, TRANSPLANTATION: OFFICIAL PUBLICATION OF THE EUROPEAN DIALYSIS AND TRANSPLANT ASSOCIATION - EUROPEAN RENAL ASSOCIATION. ENGLAND 1998, vol. 13 Suppl 1, 1998, pages 21-24, XP002267088 ISSN: 0931-0509
- D2: SHARMA V K ET AL: "Molecular correlates of human renal allograft rejection" TRANSPLANTATION PROCEEDINGS, vol. 30, no. 5, August 1998 (1998-08), pages 2364-2366, XP002267089 Meeting on New Dimensions in Transplantation: Weaving the Future; Florence, Italy; February 16-19, 1998 ISSN: 0041-1345

2. NOVELTY (Art. 33(2) PCT)

- D1 discloses the provision of a molecular transcriptional profile by means of RT-PCR, identifying the transcript of TGF beta as significantly upregulated in the rejection process of human renal allografts (also called intragraft gene expression), care especially for table 1. TGF beta is thereby identified to be positively correlated with chronic renal rejection. This is confirmed by the finding that amongst those patients that showed no signs / clinical indication for CR, most were negative for TGF beta expression.
- Prior art D1 is novelty destroying to claims 1, 2, 6, 10 and 11. 2.
- D2 also discloses molecular correlates of human renal allograft rejection 3. by obtaining 102 renal allografts from 107 patients and analyzing these

EXAMINATION REPORT - SEPARATE SHEET

samples for intragraft RNA expression by means of RT-PCR, c.f. table 2.

- Prior art D2 is novelty destroying to claims 1, 2, 6, 10 and 11. 4.
- The present application does not satisfy the criterion set forth in Article 5. 33(2) PCT because the subject-matter of claims 1, 2, 6, 10 and 11 is not new in respect of prior art as defined in the regulations (Rule 64(1)-(3) PCT).

INVENTIVE STEP (Art. 33(3) PCT) 3.

- 1. In case the applicant would overcome above mentioned objections with respect to Article 6 PCT and Article 33(2) PCT the IPEA would follow the following inventive step reasoning (Art. 33(3) PCT) for claims 1, 2, 6, 7 and 10 - 14.
- 2. Document D1 is considered to represent the most relevant state of the art for claims 1, 2, 6, 7 and 10 - 14 and discloses the provision of a molecular transcriptional profile by means of RT-PCR, identifying the transcript of TGF beta as significantly up-regulated in the rejection process of human renal allografts (also called intragraft gene expression), care especially for table 1. TGF beta is thereby identified to be positively correlated with chronic renal rejection. This is confirmed by the finding that amongst those patients that showed no signs / clinical indication for CR, most were negative for TGF beta expression.
- 3. The subject-matter of claims 1, 2, 6, 7 and 10 - 14 differs in that the gene for cytokeratin 15, namely KRT15 has been identified as biomarker for renal transplant rejection.
- The problem to be solved by the subject matter of claims 1, 2, 6, 7 and 4. 10 - 14 may therefore be regarded as the identification of alternative biomarkers for renal transplant rejection.
- The solution would be the identification of the gene for cytokeratin 15, 5. namely KRT15 as biomarker for renal transplant rejection.

1

- 6. This solution can be considered as involving an inventive step (Article 33(3) PCT) since there is no indication in the prior art identifying the gene for cytokeratin 15, namely KRT15 as biomarker for renal transplant rejection. The is no second prior art that, if combined with the teaching of closest prior art D1, would make the skilled in the art come up with the solution proposed in the underlying application.
- 7. In case the applicant overcomes above mentioned objections with regard to novelty, clarity and support, the present application would therefore satisfy the criterion set forth in Article 33(3) PCT and the subject-matter of claims 1, 2, 6, 7 and 10 - 14 would involve an inventive step (Rule 65(1)(2) PCT).

VIII. Certain Observations (Continuation)

- 1 The application does not meet the requirements of Article 6 PCT because claim 1 is not clear for the following reasons:
- 1.1 The word "early" is a relative term and therefore unclear and undefined if used in the way as in underlying claim 1.
- 1.2 The term "a transplanted subject who is known not to develop CR" of claim 1 is formulated as an effect to be achieved and therefore does not meet the requirements of Article 6 PCT in that the matter for which protection is sought is not clearly defined. The claim attempts to define the subject-matter in terms of the result to be achieved, which merely amounts to a statement of the underlying problem, without providing the technical features necessary for achieving this result. Furthermore, the "at least one gene" in claim 1 is not further specified. Identifying said "at least one gene" though would be an undue burden for the skilled in the art, Article 6 PCT. The IPEA doubts, that any one gene from a tissue biopsy of a transplanted subject who is known not to develop CR is already an indicator for predicting / early diagnosing chronic rejection (CR), in this respect care also for claim 2, bearing said same deficiency. The applicant is reminded to include the essential technical features into the independent claims, which in the present case means the reference to the particular marker gene(s) and their relationship in chronic rejection (CR). For these reasons claim 1 lacks clarity according to Art. 6 PCT taken in combination with Rule

6.3 (b) PCT (see also PCT Preliminary Examination Guidelines III.4.3).
